

How does it work ?

In order to provide you with a clear working basis while giving you large amplitude in your choices, we decided to adopt a work principle based on annual work packages (WP).

For the 13th exercise, we selected 10 WPs, dealing with different aspects of an aerospace programme. Information about the project and a list of subjects that can be approached are given.

This year, whatever the WP, the study has to show that the proposed solution is economically viable and environmental friendly. These two points will be part of evaluation criteria of final reports. As a matter of fact, these subjects are becoming more and more important in aerospace projects.

Proposed topics for 2018/2019 are :

- [WP1 - Aerodynamic and Flight Control](#)

- [WP2 - Structure suited to suborbital flight](#)
- [WP3 - Reusable propulsion](#)
- [WP4 - Cabin layout and associated equipment](#)
- [WP5 - Automated or piloted vehicle](#)
- [WP6 - Promotion](#)
- [WP7 - Project economy](#)
- [WP8 - Legal frame](#)
- [WP9 - Medicine](#)
- [WP10 - Airworthiness](#)

You will justify the choice of your WP when you register, by explaining its consistency with your academic cursus, experience and motivations of members of the team.
